FORMS DATA LOADER FAQs

Forms Data Loader is a easy tool used to load data into Oracle Apps through front-end applications forms. It provides an easy interface to use and cost effective solution for loading test or legacy data into Oracle Applications. Although it is specially built for loading data into Oracle, It can be used to load data in any application running under Windows. Most important thing is it requires no special technical knowledge and can be used by any non-technical end users as data is loaded through front end.

□ **Forms Data Loader Advantages:**

- Loads data directly into front-end forms thus no direct connection to the database is required.
- Requires no special technical knowledge, can be used by non-technical end users as data is loaded in forms.
- Saves lots of time. Prepare load once and replicate the load as many times as you want.
- Completely transparent to the application.
- Accurate. All validations define in the application forms are performed.
- Useful for developers who have to enter data into forms repeatedly while testing applications.
- It is useful for loading legacy data into applications where data cannot be loaded directly into tables easily.

□ **Some of Important Features:**

- It is compatible with Oracle Applications 10.7, Oracle Apps 11, Oracle Apps 11i & Oracle Apps 12i.
- Loads data through Macros, Forms Record and Playback Mode.
- Import data from Comma Separated Values Files (CSV), TAB Delimited Files or any other char delimited files.
- Copy & Paste the data from Excel or any spreadsheet.
- Sort the data in ascending and descending order on any field
- Load hundreds of rows into target applications in very short time
- Comes with built-in sample spreadsheets templates to learn how to build loads
- Completely transparent to the target application.
- Support for registered users.
- Supports Data verification while data is entered into forms. So no more errors while loading.
- Data is entered through Oracle Applications Forms, so all the validations are performed.
